SVEIN RASMUSSEN

Are you an Olympic windsurfer, a seasoned Techno rider or a freerider looking at taking part in local events? Come fly with iFoil. Course racing, GPS ,slalom and long distances. Let's test what format are best suited in your local sailing area. We at Starboard realize that being associated with the iFoil class means new responsibility, expectations and determination. A whole new chapter is about to take shape and as we are just getting started, we need your help and guidance to create positive environment that can grow, prosper and become the most exciting windsurfing community of all time. Let's also figure out ways to unite in protection of our oceans while having loads of fun foiling into the future.

Please do contact us with your ideas: iFoil@star-board.com

TIESDA
YOU

REMI
VILA

The Race foil that started it all.

It started with weekend windsurfers. Then came Formula racers, PWA racers and the Olympic community.

From this opportunity was born the iFoil vision: **To inspire windsurfers of all levels** - weekend racers, professionals and Olympians alike - to race together at a wide range of exciting events, on fair, simple and affordable foiling equipment of the highest performance.

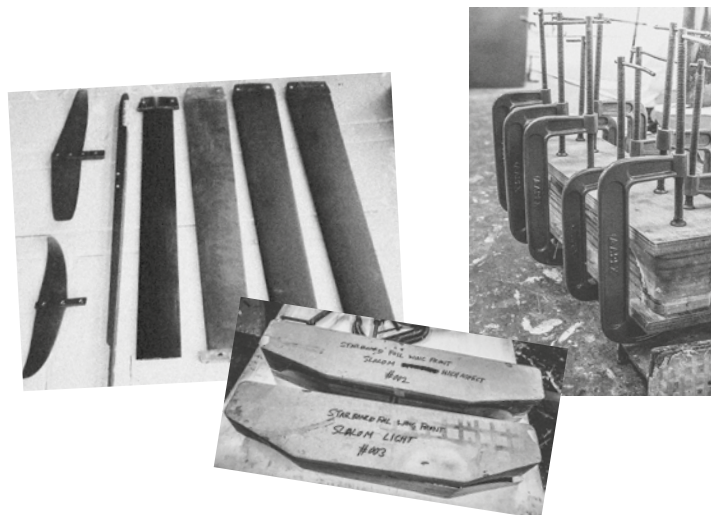

One board, one sail, one boom, one foil, one fin: you can race with your friends every weekend or go for gold every quadrennial. There's never been such a uniting opportunity in windsurfing and that's the most exciting part about the iFoil project.

Tiesda You,
Founder, Starboard Foils

With the uprising of the iFoil, we bring you the most exciting and up to date equipment to the Olympics. We offer an affordable package that brings high level racing performance in all conditions.

Let's bring the fun again to the Olympic scene and beyond.

Remi Vila
iFoil development team

We have stopped using virgin plastic packaging on our boards, but the board's styrofoam, paint, epoxy and EVA come from fossil fuel/oil.

With the help of Starboards' internal plastic tax, we fund the Plastic Offset Program (POP).

After calculating the plastic footprint of the iFoil, it was settled that the Starboard Plastic Offset Program will collect 2.4 kg of plastic trash for each iFoil board sold. Our target this year is to collect a total of 50,000 kg from beaches around our test center in Thailand. We will keep on picking plastic trash until regulations are in place to stop the destruction of our oceans.

HEYERDAHL CLIMATE PARKS

100X
CARBON NET
POSITIVE

We want to share that the climate crises partially come from deforestation. We need to regenerate forests for the challenging years ahead. Sea trees or mangroves are important players as they absorb more CO₂ than any other sources while also helping clean the ocean, and sheltering coastal villages from heavy storms.

We are partnering in replanting one billion mangrove trees over the next 10 years. The pilot project in the Thor Heyerdahl Climate Park with six million trees is already finished.

Calculating the total carbon footprint of an iFoil based on production and raw materials, we found that it creates 0.1 ton of CO₂.

For each Olympic Starboard iFoil we will plant 10 trees, absorbing 10 tons CO₂ over 20 years, making the iFoil board 100 x climate net positive.

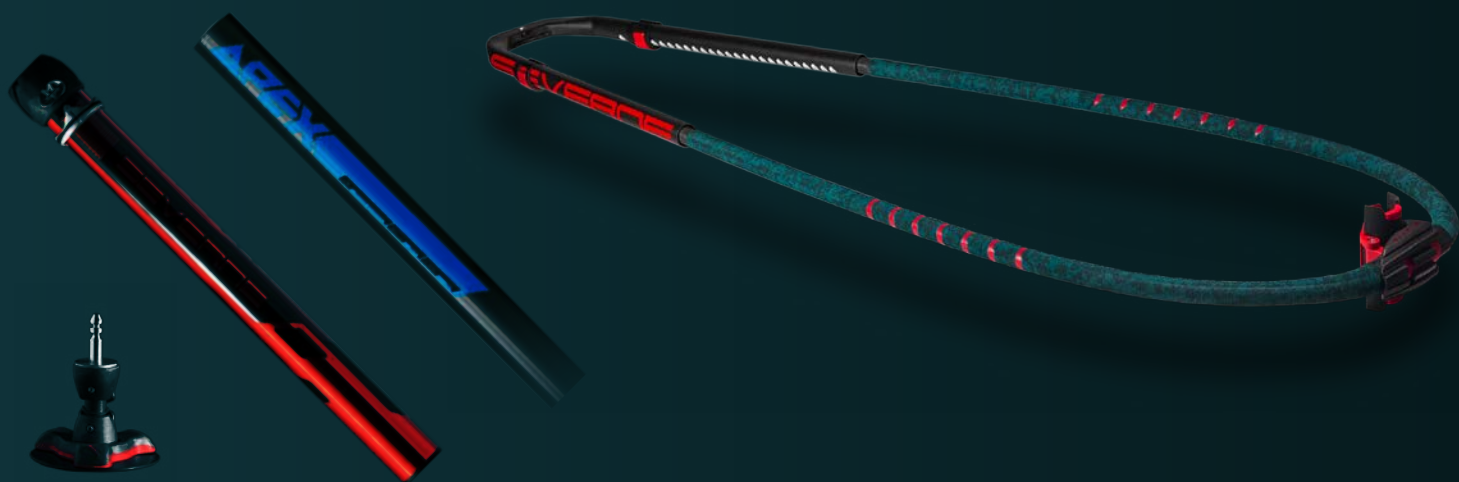

Every tree counts and with your help we can inspire others to follow suit.

LOOKING INTO THE FUTURE

We want to see iFoil events become 10 x climate net positive, ban all types of single use plastic and help the iFoil class not only become the best in the world but also **the best for the world**
